PROFESSIONAL SUMMARY

AWS DevOps Engineer with 2+ years of experience designing, deploying, and maintaining cloud monitoring and infrastructure solutions on AWS. Skilled in Infrastructure as Code using Terraform, CI/CD automation with Jenkins, and implementing centralized monitoring platforms using Prometheus, Grafana, Node Exporter, and Alert manager. Experienced in monitoring AWS EC2 instances, Linux servers, and Docker containers, developing Grafana dashboards with PromQL, and configuring automated alerting through Slack and email notifications. Proficient in Linux administration, AWS services including EC2, IAM, and CloudWatch, and applying AWS Well-Architected Framework principles to improve reliability, security, performance, and operational excellence. Strong experience in technical documentation, incident response, and collaborating with cross-functional teams to enhance system availability and reduce Mean Time to Detect (MTTD).

TECHNICAL SKILLS

Programming Languages: Python, Java, Bash, Shell Scripting
Cloud Platforms (AWS – Compute & Storage): EC2, S3, Lambda, RDS, ECR, EKS, Auto Scaling, SNS, CloudWatch
AWS Networking: VPC, Subnets, Route 53, Elastic Load Balancing (ALB/NLB/CLB), NAT Gateway, Internet Gateway, VPC Peering, CloudFront, Direct Connect
AWS Security: IAM, AWS KMS, Secrets Manager, Security Groups, NACLs, AWS WAF, AWS Shield, Guard Duty, Security Hub, ACM, AWS Config, CloudTrail
Containerization & Orchestration: Docker, Kubernetes, Amazon EKS, Helm
Infrastructure as Code (IaC): Terraform, AWS CloudFormation
Monitoring & Observability: Amazon CloudWatch, Prometheus, Grafana, Dynatrace, Node Exporter, Alert manager, PromQL
Configuration Management: Ansible
Version Control & CI/CD: Git, GitHub, GitLab, Jenkins, GitHub Actions, AWS Code Pipeline
Databases: MySQL, PostgreSQL
Operating Systems: Linux, Ubuntu, Amazon Linux
Methodologies: DevOps, IaC, GitOps, CI/CD Automation, SRE, Cloud Security, Disaster Recovery & Backup, AWS Well-Architected Framework, Technical Documentation & Runbooks

PROFESSIONAL EXPERIENCE

AWS DevOps Engineer

Tata Consultancy Services (TCS), Hyderabad | June 2024 – June 2026

- %ïDesigned, deployed, and maintained a centralized Prometheus and Grafana monitoring platform, delivering real-time visibility into infrastructure health across multiple Linux servers and cloud environments.
- %ïAutomated provisioning and configuration of monitoring infrastructure using Terraform, enabling consistent, version-controlled, repeatable deployment of Prometheus, Grafana, and Node Exporter across environments.
- %ïIntegrated Jenkins CI/CD pipelines with the monitoring stack to validate application health post-deployment, trigger automated alerts on failed builds, and accelerate release cycles from weekly to daily.
- %ïInstalled and configured Node Exporter on Linux servers to collect CPU, memory, disk, filesystem, network, and system load metrics; configured Prometheus scrape jobs, service discovery, recording rules, and alerting rules for continuous infrastructure and application monitoring.
- %ïDeveloped interactive Grafana dashboards using PromQL queries to visualize infrastructure performance, server availability, application health, and resource utilization.
- %ïIntegrated Alertmanager with email and Slack notifications for automated alerting on CPU, memory, disk, and service downtime; tuned alert thresholds, grouping, and deduplication policies to reduce alert fatigue and improve incident response efficiency.
- %ïMonitored AWS EC2 instances, Linux servers, and Docker containers to improve operational visibility and system reliability; performed proactive capacity planning and troubleshot exporter, scrape, and connectivity issues by analyzing Prometheus target status and logs.
- %ïApplied AWS Well-Architected Framework best practices across the Reliability, Security, Cost Optimization, Performance Efficiency, and Operational Excellence pillars when designing and reviewing monitoring and cloud infrastructure solutions.
- %ïAuthored and maintained technical documentation, dashboard guides, operational runbooks, and standard operating procedures (SOPs) for monitoring, alerting, and incident response, improving knowledge transfer and reducing onboarding time.
- %ïCollaborated with DevOps, Cloud Infrastructure, and application teams to implement monitoring standards and support production incident management through faster root cause analysis and reduced Mean Time to Detect (MTTD).

KEY ACHIEVEMENTS

- %ïReduced application release cycles from weekly to daily by standardizing CI/CD workflows and deployment automation.
- %ïAccelerated infrastructure delivery with reusable Infrastructure as Code (IaC) templates, reducing provisioning time by 80%.
- %ïStrengthened cloud governance and security through automated compliance controls, encryption, and least-privilege access, resulting in zero critical security findings.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate (SAA-C03), Amazon Web Services, 2026
AWS Certified CloudOps Engineer – Associate (SOA-C03), Amazon Web Services, 2026

EDUCATION

B.Sc. Computer Science– ASN Degree College, ANU University, Tenali, Andhra Pradesh
June 2021 – April 2024 | Percentage: 90.00%
